

boonbox passpro™

The enterprise-class secure password management and password self-reset solution

Passpro creates better security for password management throughout organizations

30 per cent of helpdesk calls are related to password problems.

- Gartner

Password management is a key part of overall security. With Passpro, administrators can create and enforce strong, system-wide password policies.

Effective, simplified password account creation and secure provisioning and de-provisioning of account access to business applications closes security loopholes that might have facilitated breaches through poor administrative oversight.

Passpro also provides a secure way for employees to reset their Active Directory passwords securely without IT assistance. Managers and end-users can all use Passpro to improve security from the top, down and bottom, up.

Passpro Benefits:

Improved account management. Administrators can generate user accounts across multiple systems automatically. Grant access for individuals or groups to resources with customized rules for enhanced security. De-provision user access automatically for employees that are leaving the organization to ensure your company is protected.

Effective password policy enforcement. With Passpro, managers can easily enforce password policies such as password length, character type, case sensitivity, and expiration. Passpro is management-accessible anywhere on the network through the web GUI.

Strong password protection. Self-service password reset password problems are only resolved after strong authentication, eliminating an important weakness of many helpdesks, social engineering attacks. Passpro also uses SSL encryption for world-class secure communication.

Easier security compliance. Sarbanes Oxley, HIPPA and other legislation require organizations to secure access control. Passpro takes away incentives for workers

to resort to insecure methods of remembering passwords (eg. writing passwords down on sticky notes, or using the same password for all applications).

Reduced IT budgets. In a large organization that receives hundreds of helpdesk requests per day, password reset requests become especially burdensome to support personnel. Moreover each help-desk call can range from \$30 to \$70 to resolve, industry analysts say.

Improved productivity. Industry studies show that each employee in a large organization calls the helpdesk an average of 1.75 times per month to reset their password. Password problems account for 25% or more of the total volume of IT support calls. Passpro eliminates this.

Easy implementation. There is no downtime for your network with installation of Passpro. It's an enterprise-wide solution with easy implementation.

Return on Investment. A medium-to-large organization making a relatively small in Passpro could see a reduction in operating costs of tens of thousands of dollars.
