

PCIS Protects Your Business

Network Infrastructure

Portals and Collaboration

Security and Identity Management

Why go with PCIS today?

PCIS helps organizations take proactive steps to improve security, collaboration and productivity, at a lower cost. Many organizations simply can't afford a break in business operations forced by a security breach.

IT departments are too busy handling end-user incident support to maintain and update network infrastructure security and online security for their organizations. Meanwhile, a challenging economic climate highlights the need for organizations to maintain readiness.

Why choose Pacific Coast Information Systems Ltd.?

We have over 14 years experience providing security and a full range of IT solutions for businesses, governments and non-profit organizations.

You can have the peace of mind that we have the expertise to help you achieve your security goals. PCIS offers packaged infrastructure and network security services that help protect your organization while saving time and money.

What security-focused packaged services does PCIS offer?

PCIS has a range of security offerings to help your organization understand and protect its network infrastructure and provide website protection and web application security.

[Devfense Discovery Network Assessment](#) provides a report including an inventory and topology of your network to help your organization understand the state of your IT environment, how it is connected and what kinds of security improvements may be required.

Effective management and operation of IT first requires an understanding of your company's IT landscape and how IT supports business operations. PCIS' product division, Boonbox, has developed Devfense DNA to provide organizations with a clear

of Information
Technology, Regional
Non-profit
Organization**

description of their IT assets, an assessment of operations, and recommendations to improve the general health of an organization's network infrastructure.

[Devfense Network Security Assessment](#) helps you identify your assets and understand the security vulnerabilities. With Devfense NSA, your organization will be prepared for third-party annual network audits.

Devfense NSA (Network Security Assessment) extends the baseline discoveries of the Defense DNA findings to addressing security, compliance and data integrity. Devfense NSA helps your organization define an effective and realistic schedule for implementing security improvements.

[Devfense WSA – Web Security Assessment](#) finds the vulnerabilities in your web applications and helps you understand how to fix the issues. Devfense WSA provides a report on your vulnerabilities and your security compliance. PCIS can also be contracted to fix your web vulnerabilities. If you've already been hacked, PCIS can also fix your database and other systems that have been infected with malware and other issues.
